

# Sound Cleaner II

Comprehensive  
audio restoration

Sound Cleaner II is a professional noise suppression and speech enhancement software solution that uniquely combines state-of-the-art filtering algorithms and speech enhancement tools in one product. Each module can be easily activated and combined with others during the filtering process so that all changes made to the audio file can be reviewed and assessed on the fly. By rethinking the computation and, by reinventing our approach, we have created a new version of Sound Cleaner II that addresses all the unique challenges associated with uncontrolled recording.

## Forensics

Audio enhancement and filtering are essential to law enforcement and private agency investigative work when audio evidence is involved. Whether the need is to eliminate interference to improve voice clarity or enhance background noises for better analysis, Sound Cleaner II is the perfect solution.

## Broadcasting

When it comes to recording live location sound - you can never avoid all the things that drive your sound producer up the wall. Gale force winds, chanting protesters and construction noise can completely spoil an interview. But here's the good news. With Sound Cleaner II, location noise no longer matters. Sweep away the hisses and the drones and let your TV and radio audiences hear the real message.

## Archiving and Restoration

Whether it's crisp vinyl blues or ancient chants, Sound Cleaner II gives you the power to treat your valuable recordings with surgical preciseness. Sound Cleaner II's innovative algorithms deliver superior sound - minus all the hiss, crackle and buzz of old vinyl and tape recordings. Cut the noises loose and save the voices and melodies of the past.

## Highlights :

- State of the art noise reduction algorithms
- 4096-band EQ
- Simultaneous view of initial and processed signals
- On-the-fly adjustments and immediate results
- Built-in text editor with text linked to audio
- Automatic report generator
- Wide range of audio formats and codecs
- Extraction of audio from video
- Default presets for common cases and unlimited custom presets
- PC and Mac support
- VST 3 support

## Studio Work

What is more sophisticated than studio recording? When you're dealing with professional equipment, working with racks of hardware and mastering frequencies - there are no amateurs allowed. Whether you're creating new sounds, building futuristic effects or just listening, the trouble comes knocking when you hit the "on" switch. Sound Cleaner II gets rid of unwanted hum so you can keep humming along to the good stuff.

## What's new

Since its first release 15 years ago, Sound Cleaner has grown in popularity across the international audio forensic community for its simplicity and effectiveness - even in the most challenging cases.

We are now pleased to announce the release of Sound Cleaner II, the newest version of this AES award winning audio enhancement software. In addition to bringing Sound Cleaner II users new essential noise filters and other exciting features, almost every aspect of the program has been rethought and redesigned. Get rid of cell phone pick-ups and DTMF dialing beeps with the cell phone filter and DTMF Suppressor. Restore clipped audio with the Clip Restorer. Novice audio analysts will enjoy Auto Filter, which fixes common noise types with one button.

Ideal sync of separately recorded reference and main channel is a must precondition for successful filtering. Now this operation is done automatically by Sync function to provide users with the best results.

## System Requirements

**CPU:** Intel® Core™ 2 Duo processor 2.66 GHz or higher

**OS:** MS Windows 7, Windows 8, Mac OS X

**HDD:** 16 GB available hard disk space

**RAM:** no less than 1 GB
