

VoiceKey.WEBACCESS

Voice + Face biometric authentication online

Complex passwords or cumbersome dongles are now obsolete. Biometric technology offers a secure and user friendly solution to authenticate online. The combination of voice verification and facial recognition guarantees high accuracy of authentication with a simple interface that utilizes hardware readily available on every smartphone and laptop.

Now you can supplement or replace traditional authentication online with **VoiceKey.WEBACCESS**

Easy Enrollment on your PC, Mobile or Tablet in less than a minute.

- Position your face on the screen using integrated camera
- Click on Icon when in position
- Read random numbers prompted on screen

VoiceKey.WEBACCESS offers unparalleled biometric security solution

- **VoiceKey.WEBACCESS** triple checks identity:
 - Voice authentication
 - Facial recognition
 - Liveness detection
- **Protect.** Protects private or paid content, corporate networks and personal data
- **Verify.** Supplements or replaces traditional online verification methods
- **Simplify.** Standard PC microphones and cameras provide excellent facial images and voiceprints

Accuracy

High accuracy due to facial & voice biometrics fusion

High Speed

< 1 min for enrollment
5 sec for verification

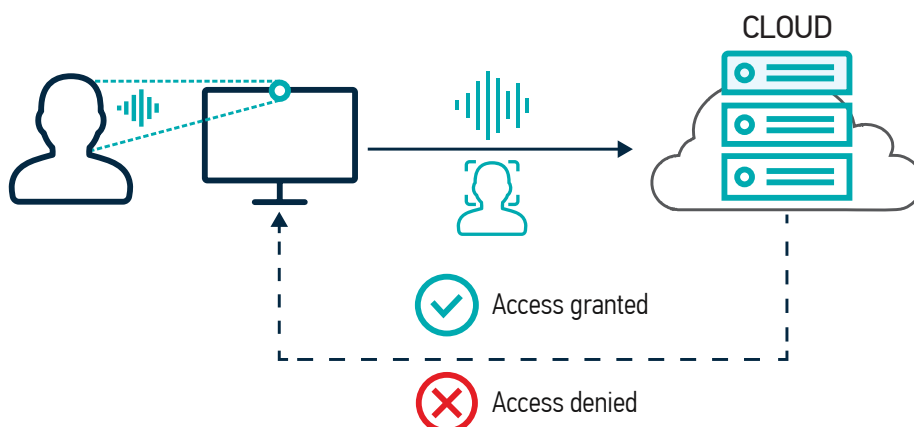

Liveness detection

Photo, video or audio can not be used for authentication

How Does WEBACCESS Work?

- **ADD** WebAccess can be added or replace traditional password logins
- **ENROLL** To enroll, take one picture and record 3 short utterances (passwords)
- **COLLECT** When a user tries to access a secure service WebAccess asks him to pronounce a password and takes a smartphone picture of his face at the same time multi-biometric data collection in just one click
- **PROCESS** The voice and image templates are formatted algorithmically and sent to the cloud for processing
- **ACCESS** If the matching results are positive, the user gains access; if not, access is denied
